

# DIDSBURY PIONEER

VOL. XXXIV, No. 23

DIDSBURY, ALBERTA, THURSDAY, AUGUST 12, 1937

\$2.00 per Year. 5 Cents a Copy

## Alberta Sales Tax Withdrawn Tuesday.

Hon. Solon Low announced late Monday that the Alberta sales tax would be removed August 10th.

He disclosed the move was made as a result that people were deferring purchases until the previously announced remission date of September 1st.

## Evangelical Church Notes.

The subject for discussion next Sunday morning will be, "The Prayer Life of Christ." In the evening the pastor will speak from the theme "Adventuring on Christ."

## Mountain View M.D. Council Meeting

Very little other than routine business was transacted at the meeting of the Mountain View municipal council held Saturday at Olds.

It was reported that the department of public works would renew two bridges on the Lone Pine and Nine Mile Creeks on the road going east two miles south of the Olds town line.

A letter was read from the Central Alberta Association of Municipal Districts, asking that the council support a resolution protesting against the department of public works transferring the maintenance of bridges from that department to the municipal districts. The council decided to endorse the resolution.

The amendments to the Municipal Districts Act passed at the last session of the Alberta legislature, were discussed.

One application for old age pension was approved and one application under the Farmers' Credit Arrangement Act was reported.

The secretary stated that the sum of \$184.19 had been paid out in relief during July.

The road program was discussed and it was thought that on account of the loss of time owing to bad weather the grading crew could accomplish very little in addition to the first program mapped out in the spring.

## WEEKLY JOKE

Tenderfoot: "What sort of neighbors have you?"

2nd Tenderfoot: "Well, there's the blacksmith who's engaged in 'forging,' a carpenter who has done a lot of 'counter fitting,' and a couple of fellows who sell iron and 'steel' for a living."

## Premier Aberhart Assumes New Post

On Monday Premier Aberhart assumed duties of acting attorney-general after the announcement on Saturday that Hon. J. W. Hugill, K.C., had resigned his post at the request of the premier.

It will be unnecessary for an order-in-council transferring the portfolio to the premier. Mr. Hugill having left for Toronto on Saturday to attend the annual meeting of the Canadian Bar Association, Premier Aberhart automatically becomes the acting attorney-general, that being the procedure when the chief law officer of the Crown is out of the province.

Following the Bar Association meeting, Mr. Hugill will remain on holiday, returning to Alberta about the middle of September to formally vacate office.

## Moose Seen East of Town

On Sunday morning Russell Fulkert when looking over his wheat field was surprised to see two moose (bull and cow) peacefully sampling the quality of his wheat. When disturbed they jumped the fence and after sampling the grain in several neighboring fields, went on their way in a southeasterly direction.

Moose have often been seen on the farms west of here, but are rarely seen east of the track.

## Dynamic Picture.

Sylvia Sidney and Spencer Tracy are the brilliant co-stars of "Fury," the M-G-M picture showing at the Opera House this Friday and Saturday.

And in this powerful screen play they give performances that will linger long in your memory!

The narrative has to do with the tragic circumstances that separate two young lovers on the eve of their marriage. Tracy, as the man, is arrested as a kidnap suspect and apparently burned to death by a furious mob that storms and fires the prison in which he is held.

His life wrecked and his mind twisted by the horror he has been through, he goes into hiding and contrives to have twenty-two of the mobsters convicted of his murder.

As a hard-hitting indictment of a national shame, "Fury" stands out as one of the finest pictures, for its power lies in its altogether objective approach to the subject of mass-lawlessness.

## Junior Wheat Field Inspection Results.

Hugh McPhail, district agriculturist judged the Junior Wheat Club plots this week. The following is the standing of the boys' plots in order of merit:

1 Arthur Gooding	81.5
2 Owen Hardbottle	77
3 Delbert Levagood	75
4 John Hardbottle	74
5 Henry Brown	72
6 Elwood Topley	71
7 John Morton	71
8 Arnold Thurlow	71
9 Colin Hogg	70
10 Ian Stanton	70
11 George Gibson	65
12 Lloyd Fischer	62.5
13 Albert Krebs	61
14 Leslie Evans	60
15 Milford Cressman	57.5
16 Charles Loader	57
17 John Bruce	56.5
18 Douglas Burns	56
19 Charles Snyder	56
20 Glen Myers	56
21 Irwin Schmidt	56
22 Robert Eckel	55.5
23 Arthur StClair	52.5
24 Paul Hanson	50.5
25 Eric Hanson	50

Mr. McPhail stated that the boys had made creditable showings when the drawbacks of the growing season were taken into consideration. Low scores do not indicate lack of interest as weeds in many cases were this year uncontrollable.

## Bennett to Continue as Tory Leader

For an "indefinite period" Right Hon. R. B. Bennett will continue as leader of the Conservative party.

The ex-prime minister at Ottawa Saturday proffered his resignation to a caucus of tory members of the Commons, but they sounded him out about his health and the possibilities of his continuing, and sought a way of declining the resignation. The Conservative leader admitted that his health was much improved, but frankly wanted to drop out and make way for someone who could carry on. The members, however, could think of no man of Mr. Bennett's calibre to replace him and so persuaded him to permit the resignation to remain in abeyance.

There had been some talk about Senator Meighen returning to the leadership, but evidently the members wanted Mr. Bennett to continue if at all possible.

## Open New Hall, Melvin

The new Melvin Community Hall was opened Wednesday last, when a large crowd gathered to help celebrate the occasion.

A fowl supper was provided by the Melvin ladies, and about one hundred persons sat down to this splendid repast.

Following the supper, the Didsbury "Whiskers" and Melvin "Gunny Sacks" (all veteran ball players) gave an exhibition of softball that was filled with thrills and comedy. Melvin was leading 15 12 at the end of the 6th inning when both teams decided that the going was too strenuous. August Krebs, the Melvin pitcher, held the mound the full game, but Didsbury had to ring in four pitchers (Reiber, McLeod, Moffatt and McCloy) to keep the game going. Irrespective of the class of ball played, the spectators got a great kick out of the game.

The teams were—Melvin: Orville Swingle, August Krebs, Emil Krebs, John Jacobsen, John Schneidmiller, Mart Jacobsen, Bill Stubbs, Otto Krebs and Henry Fischer.

Didsbury: Eric Moffatt, Bill Smith, Clint Reiber, Norman McLeod, Jack McCloy, Ed Buhr, Jim Kirby, Frank Kaufman and Bill McFarquhar.

The dance in the evening was one of the largest attended affairs ever held in the west country and about 400 persons were present. The hall was packed to its capacity, but the crowd seemed to have a good time dancing to the music supplied by the Prairie Rangers Orchestra.

During the evening Mr. George Clark, Reeve of Westerdale Municipality, and Mr. Henry Goehring, spoke and complimented the Melvin folk upon the community spirit they had shown in erecting such a splendid building.

The hall, which is the largest community hall in the district, is 30x80 over all with stage and dressing room space 18x36, giving a dancing floor of 36x62. Under the stage will be a kitchen 18x36 which will be completed in the near future. The building is of frame construction on a concrete foundation, with a round shingled roof. The dance floor is laid with hard maple.

The farmers in the district donated their labor in the construction of the building and a good deal of the lumber was logged by the farmers. The building of the hall is the culmination of the efforts of the community for the past two or three years, and they are to be complimented on its completion.

## Essential Government

Since the onslaught of the now famous and much publicized depression one has heard occasionally the suggestion that municipal government should be abandoned, the proposal usually being advanced in the interests of economy. As the depression deepened and its baneful effects became more apparent this proposal was heard more frequently in the prairie provinces—the hardest hit section of the Dominion.

The suggestion has emanated from various sources and has cropped up now and again here and there, but fortunately the idea does not appear to have gained much ground, nor has much weight been given to the suggestion in any influential quarters. It has not received support by those who are able to seriously influence public consciousness.

It is true that the cost of government in this country is too high. There is no gainsaying the statement that public expenditures for services rendered are excessive and should be curtailed but, even considering the matter solely from an economic viewpoint, it is doubtful whether any saving to the pockets of the people would be effected by the abolition of municipal administration, either urban or rural. On the contrary, there are very good reasons for believing that such a move would result in an increase in the cost of government.

If there is any form of government which should not be impeded, and still less abandoned, it is local self-government.

There are services rendered by the municipality, urban or rural, which could not be rendered either as effectively or as economically by a more remote authority. It is not necessary to enumerate those services. Any person can at once think of a number of them. They are services which the people would not be content to do without and would not wish to have performed as privately-operated enterprises. In fact, they are now being rendered on a community basis because, for more reasons than one, people have come to the conclusion that such services can be provided more efficiently and more cheaply as municipal enterprises.

Moreover the nature of these services is such that the conditions under which they are provided have to be suitable to local conditions and local requirements. Under long range administration they would inevitably be expected to conform to a pattern which would render them valueless in some localities and of little use in others. Further, when changes in form of service were required because of seasonal or local conditions, the necessary changes could not and would not be made effective in time to be of any value if appeals had to be made, either to provincial or Dominion capitals.

To offset this handicap of inaccessibility it would be necessary for the central authority to establish and locate officials in every small unit throughout the country and they would have to be clothed with sufficient authority to make rules and regulations to meet changing local conditions, involving the establishment of a regular army of inspectors and administrators who would have no direct responsibility to the people they served and would not be responsive to local demands. Such a system would not only tend to inefficiency but would inevitably be expensive.

But apart from the questions of economy and efficiency involved in such a proposal there is an even more potent reason, not only for the retention but the strengthening of local self-government.

Local self-government has often been referred to as the keystone in the arch of democratic government and its removal would weaken the entire structure of democratic government. In this direction it would have a far more serious effect than at first blush might be supposed.

Municipal government is the government closest to the people it serves, and because of this it is most responsive to the wishes of the people. It is the kindergarten of all democratic governments and more often than not is the training school for service in the provincial and Dominion arenas. In the local councils the members learn by experience that they must carry out the wishes of the majority if they are to continue in office and yet at the same time afford some protection for the interests of minority groups—the foundation of all democratic rule.

It has not and cannot be demonstrated that abandonment of municipal government would effect one iota of saving to the taxpayers, nor can it be shown that the services rendered by the municipal government could be more efficiently rendered by other and less responsive authorities.

The loss of local self government would be a serious thing for the people and might well be the beginning of the loss of all self-government.

### New Bone-Setting Formula

#### Adjustable Brace Allows Animals To Walk On Broken Leg

A new bone-setting formula, expected to save the lives of thousands of animals heretofore destroyed because they wouldn't keep off broken legs, was described to the Eastern States Veterinary Association by Dr. Otto Stader, of Ardmore, Pa.

Small aluminum pins are put into each side of a broken bone from an adjustable brace. This permits a dog to walk while the break is healing.

The word quarantine comes from the Latin quadraginta, or 40, the original number of days in a quarantine.

## ITCHING

**TORTURE STOPPED In A Minute!**  
For quick relief from the itching of pimples, blotches, eczema, athlete's foot, rashes and other skin eruptions, apply Dr. D.D.D. Prescription, antiseptic, liquid D. D. D. PRESCRIPTION. Its gentle oils soothe the irritated skin. Clear, greaseless and stainless—dries fast. Stops the most intense itching instantly. A 35¢ trial bottle, as drug stores, proves it—no money back. Ask for—**D.D.D. Prescription**

### Physical Training For Youths

#### Lord Baden-Powell Opposes It For Several Reasons

Lord Baden-Powell, the Chief Scout, attacked gymnastic training for youths.

"There is no reason for gymnasia as far as I can see," he declared at a dinner of the 100 Club at Grosvenor House.

"The finest men I have ever met had no gymnasia but they had plain food of a healthy kind and took plenty of outdoor exercise."

We are now trying to inflict physical training on poor boys, not very well fed.

"It is not, I think, quite the right way of developing a strong healthy nation," he added, "because no two boys are alike in physical ability and a great many are not fit for the work given to a whole squad."—Overseas Daily Mail.

Desert animals and birds, as well as humans, often quench their thirst by tapping barrel cactus, natural water barrels.

### No Liquor Advertising

#### Broadcasting Corporation Is Not Contemplating Acceptance Of Programs

Major W. E. Gladstone Murray, general manager of the Canadian Broadcasting Corporation, has issued the following statement:

In view of current misunderstanding and misrepresentation, the Canadian Broadcasting Corporation announces that the acceptance of programs sponsored for the sale of spirits, wine or beer is not contemplated for any of the stations of the corporation or any of its networks.

As, however, the Canadian Broadcasting Corporation is responsible for the control of all broadcasting in Canada consideration is being given to revised regulations.

In this connection special attention is being paid to the problem of the sponsorship of wine and beer program in the province of Quebec by private stations where such programs are allowed by the laws of Quebec and by the regulations of the old radio commission and have been broadcast by some private Quebec stations for a number of years.

### Actor Had Hard Struggle

#### Sir Cedric Hardwicke Worked Hard To Attain Success

Sir Cedric Hardwicke, who has returned to London after a long stay in Hollywood had a hard struggle in his younger days on the stage.

For a long time his parents refused to let him be trained, and even when he got a walking-on part at the Lyceum at the age of seventeen, he was told he was no good.

He was so discouraged by this and other experiences that when he returned to civilian life after the war he decided to take up another career. A chance meeting with Sir Barry Jackson, however, made him change his mind.

Sir Cedric claims to have been the last British officer to leave France after the war. It was his duty to haul down the flag at St. Pol in 1921, and he still keeps the flag in his property basket.

He was also one of the officers to mount guard over the body of the Unknown Warrior before it was brought to England.—News of the World.

### SELECTED RECIPES

#### FRUIT SALAD DRESSING

- 1 egg
- 1 tablespoon sugar
- 2 tablespoons Crown Brand Corn Syrup
- 3/4 tablespoon Benson's Corn Starch
- 1/2 tablespoon mustard
- 1/2 teaspoon salt
- 1/2 cup pineapple juice
- 1/2 cup orange juice
- 1/4 cup cider vinegar
- 1/2 cup cream, whipped

Method: Break the egg into top of double boiler; add sugar, Crown Brand Corn Syrup, Benson's Corn Starch, mustard and salt. Beat all vigorously until there are no lumps in the mixture. Now add the fruit juices and cook in top of the double boiler until the mixture begins to thicken. Stir in the vinegar and again cook for 10 minutes. Strain, and when cold fold in the stiffly whipped cream. This makes a delicious salad dressing for all fruit salads.

### Interested In Children

#### Queen Mary Attends Garden Party In Aid Of Invalids

Since the accession of the King and Queen it has been noticed that Queen Mary has often taken over the little Princesses at public functions. On June 12 Her Majesty went to a children's garden party held in the beautiful grounds of Lambeth Palace, where young people were enjoying the fun of the fair with swings, roundabouts and donkey rides. Queen Mary stood on the broad terrace to receive purses from schoolchildren from all over the country and the children of members of the committee who were organizing the garden party. Queen Mary takes a great personal interest in the Invalid Children's Aid Association, for whom the garden party is given. In the past she has sent primroses from Sandringham for the little patients, and after banquets at Buckingham Palace, the sweets on the tables have been sent to them at her instruction.

Shipyards of Finland are operating 24 hours a day.

### No Onions From Spain

#### One Reason British Market Has Opened To Canada

An insignificantly placed item in the news the other day tells of onions being exported from Canada to England for the first time during the last fiscal year ending in March. This is no doubt a cause for congratulating the Department of Trade and Commerce, even though the exporters might have wished the total to have been larger.

Why has the market so suddenly been opened to Canada? In the absence of further details it may not be far wrong to guess that Canadian onion-growers can thank the war. The British housewife for years has been accustomed to ask for "Spanish onions" at the greengrocer's. And in addition a familiar autumn sight in and around London, are swarthy, foreign-looking men, shouldering curious strings of onions, knocking at suburban doors, and in broken English offering their wares for sale. Those foreigners are the sturdy Basques, who venture abroad regularly after the onion harvest to trade a bit and see a little bit more of the world than their own hardy country.

There will hardly be any picturesque onion-selling Basques in England this autumn. The only Basques making the journey over to England this year are the hundreds of little refugee children who have lost home parents and all their little world in the horror of a modern civil war.

But Canada for the first time on record sells onions to the United Kingdom.

### A Real Grievance

#### Messenger Boys Had Good Reason For Apparent Courtesy

A pretty young lady we know found herself upward bound in an office-building elevator the other day, in the company of a Postal Telegraph messenger boy. Not only did the boy keep his hat off during the trip, but he held it over his heart. This touched the young lady deeply, but she was more astonished than touched to meet another Postal Telegraph boy on her trip down, also with his cap clasped to his heart. She finally whipped up enough courage to ask him if this was some sort of company rule. "Listen, sister," the lad said, passionately, and with no marked degree of courtesy, "what would you do if you had to wear one of these?" Removing the cap from his breast, he pointed to a badge, almost the size of a saucer, that said, in tremendous letters, "ASK ME about the new twenty-five word message."

A new type of brick retort makes smokeless fuel, gasoline, and heavy oils from any suitable kind of coal.

### Have Better Safety Record

#### Deaf Drivers More Careful Than Those With Normal Hearing

There is a belief commonly held that persons licensed to drive automobiles should be physically sound in every way. Experience, however, shows that a physical handicap, if it is not too serious, is actually a safety factor.

The Ontario Association for the Deaf in a recent statement pointed out that deaf, and hard-of-hearing drivers, have a better record of safety than those with normal hearing. During the past eight years only five deaf drivers were involved in accidents, none of which ended fatally, or resulted in serious injury. In three of the cases the good-hearing drivers were decreed to be at fault, and the other two cases were due to speeding. The reason for this, of course, is that the deaf driver is unable to rely on his ears to help him at the wheel. Normal drivers in this respect listen for oncoming traffic and other sounds, whereas the driver with impaired hearing is ever on the alert with his eyes as it is upon his sight that he depends more than any other sense. He looks for cars, pedestrians and signals with more intentness.—St. Thomas Times-Journal.

### Versatile Business Man

#### Merchant In Ontario Town Has Been Blind For Years

Blindness is no handicap to Orville Frayne, called the most versatile business man in Forest, Ontario. Orville, who is "always 21", lost his eyesight through illness when he was 21.

He operates a tobacco and soft drink shop, where he sells rubber mats, bead work and leather belts he himself makes. He also sells and buys livestock, trades in wool, shears sheep, and keeps for rent jacks to raise buildings. Besides, he is an expert euchre player. He can read both Braille and New York point, and it is with these systems of raised characters that he plays cards. Other players announce the cards they lead when playing with him.

"I can remember what everybody held, sometimes days afterward," Frayne says.

His parents are farmers and he frequently visits them and helps with the farm work. Being blind teaches a person to concentrate, and this often gives him an edge over persons in full possession of their sight, he claims.

A high school girl, seated next to a famous astronomer at a dinner party, struck up a conversation with him by asking, "What do you do in life?" He explained, "I study astronomy." "Dear me," said the girl, "I finished astronomy last year."

**NEW**

**And Far Handier Than Older Ways!!!**

**PRESTO-PACK**

Here is the most useful waxed tissue package you've ever seen.

This new pack contains 45 sheets of silver white waxed tissue. Through the top of the pack is a metal eyelet for hanging on the wall. Inside, the tissue is held in an ingenious grip so that you can withdraw one sheet at a time by simply reaching out with one hand.

"Presto-Pack" thus becomes the handiest of all kitchen aids. You will wonder how you ever managed without it.

Warehouses at Calgary, Regina and Winnipeg

## Serious Losses Sustained In The Transportation Of Livestock To Market

When livestock are loaded on a railway car or a truck and leave the farm where they have been prepared for market, producers are apt to think that their job is done. Probably it should be so, and transportation perhaps should have developed to a stage which would guarantee the delivery of the animal in the same condition in which the carrier received it. In the final analysis, however, the animal is not produced until it has arrived at the place where it is to be merchandized. Existing evidence indicates that many changes take place in the animal body after it leaves its farm home and many of these changes reduce the value of the animal to the trade and consequently affect the cash returns to producers. The remedy for this condition would seem to have its root in producers taking more interest in ensuring reasonable care and handling of their animals while in transit. The losses referred to are to a large degree preventable and it is with the thought of stimulating producers to study the causes of such losses that this article appears here.

Each year approximately three million cattle, half a million calves, half a million lambs and one quarter

new problems arose. Many truckers were men with no experience in handling animals and little appreciation of the injury and loss which they could cause the animal and the owner by improper handling. Poor trucking equipment is a menace to the livestock business and producers should demand equipment which will transport their animals with a reasonable degree of safety, comfort and despatch. Truckers can do a good job of marketing if they are prepared to take some pains with the job, witness one trucker who last year hauled over one million pounds of livestock with the loss of only one lamb. He consistently used partitions for each contributor's stock, for stock of various kinds and always used chutes for loading and unloading. He bedded with straw and a few cinders, tied up all bulls and horned cattle, used ice for hogs in hot weather, had a canvas shade for his load in hot weather, drove at a moderate speed and always loaded within the capacity of his truck.

In railway shipping care should be taken in preparing the car. All nails, bolts, splinters or broken lumber should be removed from the walls and floor. Floor cracks should be

A mixed load including Horned Cattle, with a poor partition. Result: Dead hogs, Crippled hogs and Bruised carcasses.

of one million sheep must be moved to market from the point of production, by the various transportation agencies operating in Canada. Some are moved long distances—hogs from Alberta to Montreal—while others have only to travel a few miles. With the extension of the meat packing business in a westerly direction the long hauls are being greatly reduced and the truck, in consequence, is playing a large part in livestock delivery work.

Loss in transportation takes place from bruising, crippling and death. By far the greatest loss results from bruising. A survey carried on by the National Livestock Loss Prevention Board in the United States covering typical shipments uncovered the fact that 21% of cattle arrivals were bruised sufficiently to lower values and that most frequently the bruises were found in the region of the valuable cuts. The same survey showed that 20 per cent. of all hog arrivals were bruised, mostly in the region of the ham; and that 5 per cent. of all sheep arrivals showed bruising. The loss so sustained was a loss to producers which to a great extent was preventable. It reduced the average quality of the carcasses, increased the work required to process the animals in the abattoirs and finally resulted in a less desirable product from the consumer's point of view. No doubt the pain and suffering endured by the animal during the process of getting bruised was great and from a humanitarian standpoint alone, every possible step should be taken to prevent such injury.

Crippling in hogs was found to be four times as great as in sheep in the United States, and twice as great as in cattle and veal calves. Analysis of transportation methods shows that more hogs, cattle and sheep were crippled by truck delivery than by rail but more veal calves were crippled by rail delivery than by truck. Little difference was noted in the number of dead animals of any kind arriving by rail or truck, although the average rail haul was much longer than that of the average truck.

With the development of the motor truck as a transportation agency,

repaired. The car should and will in all probability be clean on arrival.

For hot weather sand to the depth of one inch has proven to be the best bedding. Wilby of Purdue Experimental Station says: "Death losses averaged just one half as high with sand as they did in cars bedded with other materials. Crippling losses were also lower when sand was used." In hot weather, wetting the sand before loading has proven advisable. In cold weather generous straw bedding over a layer of sand has given best results.

It is well to have the load collected well in advance of the time of train arrival so that they may rest and cool off before loading. Water should be allowed sparingly before shipping. Bulls should be loaded first and tied with a halter or neck rope to the car upright at the height of the head. Boars, stags, rams and cripples should be penned separately from one another and from the other stock, using partitions, now available from the railway companies. Partitions should be strong and adequately fastened at each end. Loose or broken partitions are worse than none at all.

In hot weather it has been found advisable to use ice blocks at various points throughout the car for hogs. They lower the temperature and decrease losses. It is suggested that 200 lbs. per car would be sufficient but the amount will depend on the temperature, the load and the distance.

Producers can do a good deal toward preparing their animals for the trip to market to avoid the losses described. Every livestock producer should have a loading chute. It will save broken legs and bruises unintentionally produced through forcing an animal up a steep step. Dehorning of all cattle would be as productive of results as any one thing producers could do. Feeding and watering in a moderate way before shipping will leave the animal normal while the overloading of the stomach with feed and water—too common a practice—causes suffocation in hogs, scours and restlessness in cattle and sheep and a heavy shrink in all animals.

### Partition Of Palestine

#### Keeping The Sanctity Of Jerusalem And Bethlehem Inviolable

The royal commission's report on Palestine makes it clear the commission and the British government regard the custody of the holy places of the country "a sacred trust" for all time.

"The partition of Palestine is subject to the overriding necessity of keeping the sanctity of Jerusalem and Bethlehem inviolate and of ensuring free and safe access to them for all the world," the official summary of the report states.

"The protection of the holy places is a permanent trust, unique in its character and purpose. . . .

"In order to avoid misunderstanding, it might frankly be stated that this trust will only terminate if and when the League of Nations and the United States desire it to do so, and that, while it would be the trustee's (Britain's) duty to promote the well-being and development of the local population concerned, it is not intended that in course of time they should stand by themselves as a wholly self-governing community." (Britain has a separate treaty with the United States under which she is pledged not to modify her Palestine mandate without United States consent).

In Jerusalem, Bethlehem, Nazareth and the Sea of Galilee (Lake Tiberias) under mandate, no question would arise of balancing Arab claims or vice versa.

"All the inhabitants of the territory would stand on an equal footing. The only 'official language' would be that of the mandatory administration. Good and just government without regard for sectional interests would be its basic principle."

The parliament of the United Kingdom "would be willing" to make up any deficit incurred in keeping the mandatory government, the summary said.

### Still An Expert

#### Yorkshire Man, 91, Makes Chains For Farm Implements

At Romptickle, near Penistone in Yorkshire, is a small shed in which George Watts is making chains for farm implements. He made chains at a nearby forge till he was 80, and since then he has gone on making them at his own home. He is now 91, but his hand has not lost its cunning, and he is still expert at bending and welding red-hot iron. South Kensington Museum has a set of his old chain-making tools.

### Not First Relationship

The fifth cousinship between the F. D. Roosevelts and the Teddy Roosevelts is the fourth instance of relationship between the two Presidents of the United States. John Adams and John Quincy Adams were father and son; William Henry Harrison and Benjamin Harrison were grandfather and grandson; and James Madison and Zachary Taylor were second cousins.

## East Arctic Patrol On The Steamship Nascopie To Secure Valuable Data

### New Treatment For Colds

#### Two Canadian Investigators Announce Results Of Tests

Relief for the majority of persons suffering with common colds is indicated possible in tests made by Drs. Eldon M. Boyd and W. Ford Connell, of Queen's University, Kingston, Ont., which they described in the Canadian Medical Association journal.

The two doctors report investigation shows a considerable part of the population suffer from colds as a result of a deficiency of the essential unsaturated fatty acids in the diet.

These fatty acids they describe as "vitamin F", a concentrated mixture of linoleic and linolenic acids prepared from refined linseed oil.

A series of experiments made on more than 100 medical students to determine the value of the "fatty acids" in prevention and treatment of common colds resulted in reducing colds 64 per cent. and diminution of the average duration 78 per cent.

A group of 41 students known to be susceptible to colds were observed without treatment for seven weeks. It was found the students had 65 colds lasting 454 days. Figures amounted to an average of 1.54 colds a man with the average duration 11.1 days.

Following treatment for seven weeks more with daily doses of vitamin F the average number of colds was reduced to 0.56 to an improvement of 64 per cent. Average length fell to 2.5 days, a decrease of 78 per cent. Similar tests were made with a group of 65 classified as not being susceptible to colds. Resulting data indicated improvement but not to the same extent.

Drs. Boyd and Connell concluded from these results that the few remaining colds were, therefore, due to other factors than the deficiency of such fatty acids.

### Made Sketch Valuable

#### Signature Of Adolf Hitler Discovered By Young Viennese

The half-effaced signature of Adolf Hitler on a sketch of the church in his native Austrian village which turned up at Vienna, raised the value of the drawing to 30,000 Austrian schillings (about \$6,637). The sketch, which dates from the German chancellor's house-painting days when he turned out such pictures to augment his meagre income, was discovered by a young Viennese while searching through family papers.

Fresh water is found 200 miles at sea off the mouth of the Amazon river; the force of the current carries the fresh water that distance.

Blackberry bushes harbor a rust which attacks wheat.

## Knitted in Strips—Easy to Join

Household Arts by Alice Brooks

String Makes Handsome Household Accessories

### PATTERN 5754

Don't envy your "best friend" her knitted spread! Make one for yourself! It's a grand pastime besides, for what could be more fascinating than watching these 6½ inch knitted strips growing inch by inch until you've enough strips of given length to join and make this spread. When you view your spread as a whole, you'll note the interesting "plaid" effect created by the open-work stitches in cross-bar design. In pattern 5754 you will find complete instructions for making the strips shown; an illustration of it and of the stitches needed; material requirements; a photograph of a section of the strip.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Personnel of the east Arctic patrol which sailed on the steamship Nascopie from Montreal recently was announced by the department of mines and resources. The expedition is under command of Major D. L. McKeand, who has commanded several similar expeditions. It will visit points in Hudson Bay and the Canadian Arctic archipelago.

Dr. L. D. Livingstone, the ship's doctor, will inspect the natives at all points of call. He has spent 15 years as medical officer in the eastern Arctic.

Craig Harbor, on Ellesmere Island, most northerly post office in the British empire, will be visited and there is an increasing interest among philatelists to get cancelled postage from that office. Emile Gravel of the postal service will have charge of the mails on the trip.

Accompanying the expedition as physiographer, D. A. Nicols of the geological survey, will continue a study of the physical geography of the Arctic regions.

C. H. Ney of the geodetic survey, with his assistant Kenneth Gladstone, will travel with the expedition to Lake Harbor, where they will embark on the motor schooner "Nanuk" with a native crew to make a series of geographical determinations at points along the south shore of Baffin Island. Remaining in the north until late October, Mr. Ney and his assistant will return south by the icebreaker N. B. McLean.

Investigations of certain rivers in Baffin Land and the sea in the vicinity of Lake Harbor will be made by H. M. Rogers, ichthyologist of the University of Toronto.

A biological survey of Frobisher Bay will be made by V. C. Wayne-Edwards, assistant professor of zoology, McGill University, who will join the Donald B. MacMillan expedition at Hebron as representative of the Canadian government.

R. Glenn Madill of the Dominion observatory will travel with the patrol as far as Chesterfield where he will leave the expedition to continue magnetic survey work in the environs of Baker Lake and Repulse Bay, later returning to Ottawa from Churchill.

A motion picture record of the expedition will be made by Richard Finnie, who has had a wide experience in taking motion pictures in the eastern and western Arctic during the past 14 years. As a member of the government expedition which flew over the north magnetic pole in 1930, Mr. Finnie obtained the only motion pictures ever taken of that area.

Secretary to the expedition will be Roy D. Cahoon, engineer of the Canadian Broadcasting Corporation, who with J. Frank Willis, maritime region program director, as his assistant, will conduct experiments in short wave transmission and reception during the trip.

As historian of the expedition, R. K. Carnegie, superintendent of The Canadian Press in Ottawa, will join the party at Churchill and make the return voyage to Halifax.

The following R.C.M.P. constables embarked at Montreal for two years' service at points in the Canadian Arctic: A. E. Staples for Port Furwell; J. Fitzrandolph, Lake Harbor; L. Weston and J. J. Watkins, Port Harrison; W. T. James, Eskimo Point; L. T. Fyfe, Craig Harbor; E. W. Leach, Pond Inlet; H. F. McCabe, Pangnirtung, and D. P. McLaughlin, spare man.

As in the past, this year's eastern Arctic expedition is expected to be productive of much valuable scientific and other information relating to native and wild life in the far north. The cruise will cover about 12,000 miles and the ship will make 23 calls and distribute supplies and mail to 45 posts where police, fur traders and missionaries are stationed.

The expedition is expected to return home about the end of September.

Ellis' in New Bond Street, London, which has had hundreds of prominent patrons during its existence of 209 years as a bookshop, was closed recently on retirement of George Smith, the senior partner.

**J. E. Gooder - Editor & Manager**

**T**HE Canadian Life Insurance As-  
sociation during the last sixteen  
years has been carrying a series of  
institutional advertising in news-  
papers throughout the Dominion.  
These advertisements have appeared  
in the "Pioneer" from time to time.

The advertising published was of  
an educational rather than a sales  
character and stressed the strength  
and security of the institution of life  
insurance in Canada, of its great  
value in times of financial stress and  
strain to the individual Canadian  
man, woman and child. It also  
pointed out the stabilizing effect of  
life insurance upon the economic  
structure of our great Dominion it-  
self.

Other financial and commercial  
institutions in Canada could profit-  
ably use this high standard of in-  
stitutional advertising.

## The World of Wheat.

By H. G. L. STRANGE

Director "Crop Testing Plan."

For the first time in four years the  
world will produce, this year, in  
spite of Canada's poor crop, as much  
wheat as it will consume about  
5,600 million bushels.

From 1928, however, the world  
consumed each year less than it  
produced, and so the world surplus,  
which usually is 600 million bushels,  
grew each year until by 1931 it  
amounted to 1,149 million bushels.

Since 1934 each year, however,  
the world has consumed actually  
more wheat than it has produced,  
and so the difference was taken out  
of the surplus until today the 1,149  
million bushels of carryover has been  
reduced not only to 600 million, the  
normal, but down to 450 million.  
This year, however, the world's crop  
will be some 200 million bushels  
more than it was last year, or just  
about sufficient to meet the world's  
needs.

The lesson to be learned here, it  
seems, is to regard wheat always as  
an international commodity, grown  
and consumed in large quantities in  
almost every country in the world,  
and to remember that deficiencies in  
any one year in any country can  
be made up by equivalent surplus  
grown in another country, all having  
its ultimate effect on price.

Following factors have tended to  
raise price: Germany prohibits use  
of bread grains as feed -- Polish and  
German rye crops expected to be ten  
per cent under last year -- Reports  
that Canada buying U.S. wheat --  
U.S. private wheat estimates reduced  
from 871 million to 841 million  
bushels -- Roosevelt announces sur-  
plus crop control essential.

Following factors have tended to  
lower price: European demand re-  
mains poor -- U.S. offering wheat --  
Expect greatest Japanese wheat crop  
in history -- China fixes maximum  
future prices for wheat and flour --  
Manchurian soy bean crop above  
last year -- Apple production in-  
creasing in Japan -- Mediterranean  
fig crop prospects favorable

## Notes From the West.

Mr. W. Blain spent the weekend  
at Banff.

Mr. and Mrs. Percy Hosegood  
and baby were the Sunday dinner  
guests of Mr. and Mrs. D. Evans.

Mr. and Mrs. Avarde Orde, Mar-  
jorie, and Mr. F. Perry visited with  
Mr. and Mrs. A. Hogg on Sunday.

The roses in Mrs. Haener's flower  
garden are well worth a visit these  
days.

Mr. and Mrs. James Hosegood  
and Douglas were visitors with Mr.  
and Mrs. Percy Bird of Garfield on  
Sunday.

Mr. and Mrs. Earl Spencer were  
renewing acquaintances at their for-  
mer home of Lethbridge over week-  
end.

A peculiar looking cloud passed  
over the Elkton district last Tues-  
day night, leaving a spattering of  
hail but not enough to do any dam-  
age.

Mr. McPhail of the Olds Agricul-  
tural Farm, was inspecting crops in  
the district Monday and reports the  
heaviest crops he has seen but not  
the cleanest.

## Bergen Notes.

Rev. V. K. Snyder is holding a  
series of meetings in Bergen Church,  
with Miss Sarah Zook as song leader.

Bergen had a good rain and some  
hail last week, but the rain did  
more good than the hail did damage.

Billy Coates has his 600 head of  
sheep in the hills west of Bergen.  
He came out Monday last with sup-  
plies and also to see the country.

P. A. Blain and wife have just  
returned from a British Columbia  
tour, enjoying the B.C. climate and  
the refreshing mountain scenery.

Olaf Sande, Jas. Graham and Mr.  
Ernest Hiecock have all bought trac-  
tors. What a lot of sod-busting will  
go on this year!

Mr. A. Moore, of Sundre, has  
bought Jas. Graham's place NE13-  
30 6 5. Mr. Moore's nephew who  
was shot in the leg with a .22 rifle,  
is able to walk around again.

Miss M. Oberhaltzer, of Eldswold  
School, and Fred Evans who taught  
at Bergen, are both attending sum-  
mer school that they may familiarize  
and study closely the new course of  
study to be used this year.

Albert Kjerfveik has his sawmill  
located on SE22 31-6 5 and is saw-  
ing lumber for Jas. Davidson and  
others in the neighborhood. Bob  
Stevens will go down soon with his  
famous planer and how the shavings  
will fly!

## WORLD HAPPENINGS BRIEFLY TOLD

An actual deficit of \$1,178,243 during the fiscal year for Newfoundland was reported in the budget speech delivered by commissioner of finance and customs J. H. Penson.

Announcement was made that Premier Benito Mussolini had approved plans for the construction of Italy's greatest combined seaplane and airport at Genoa, costing \$6,000,000.

President David Toro of Bolivia has resigned and Col. German Busch, chief of the army general staff, immediately assumed the presidency. An official announcement said calm prevailed throughout the nation.

A Cossack trick-rider, dragged several yards when he fell from his horse at the Olympia Horse Show, kicked his foot free, threw a double somersault, sprang to attention and saluted the royal box.

Dr. J. W. McIntosh, city medical officer of Vancouver, said federal and provincial health authorities were preparing to fight a threatened invasion of British Columbia, from the state of Washington, of the dread bubonic plague.

Notices have appeared at British airports warning air passengers not to take photographs "for any purpose prejudicial to the safety or interest of the state while flying over the British Isles or British territorial waters."

The Italian government has instructed newspapers that henceforth no edition must contain more than eight pages. This was said to be necessary because of the world scarcity of cellulose, which Italy must import at high prices.

The world's wheat crop will be from 20 to 30 per cent. greater this year than last, it was officially announced by the International Institute of Agriculture. Final figures will not be published until about the middle of August.

Tenders have been called for an issue of \$14,300,000 Canadian National Railways 10-year equipment trust certificates, bearing 2½ per cent. interest, D. C. Grant, vice-president in charge of financing and accounting, announced.

### What Makes Prosperity

#### War Scare Always Produces Boom In World Trade

It is not a pleasant thought, but the fact is the present boom in world trade was started by the war scare, and is mainly sustained by it. Let the war clouds clear away, and commodity prices and security markets would slump overnight, for these are being supported by preparedness buying rather than by present consumer demand. The tragic fact is the world has not yet learned how to pull itself out of a depression of plenty except by creating a fear of scarcity. And nothing creates that fear so effectively as a threat of war.—Edmonton Bulletin.

### About Butter Fat

The fat of milk is spoken of as butter fat, because it is from it that butter is made. Commercially, the fat is the most important constituent of milk, and, although in whole milk the average is only between 3 and 4 per cent. of the total, market milk is judged by the depth of the cream line or the amount of butter fat it contains.

## MAKE THIS MODEL AT HOME—SLIM-LINE FROCK IS CHIC AND DAINTY

By Anne Adams

One look at Pattern 4455 and you'll be convinced of Anne Adams' flair for turning the Matron out in something chic and slimming. What could be more appropriate for afternoons than this "charmer"? You'll find the graceful, flared sleeves a striking example of style and daintiness, while the bow-accented neckline, trim yokes, and slightly flared skirt are as smart as they can be, in addition to being very easy to cut and stitch. Pattern 4455 will prove a "wardrobe standby" for your all-occasion wear, and a joy to behold made up in bright-hued sheer, soft synthetic, or a pretty, pastel shantung.

Pattern 4455 is available in women's sizes 34, 36, 38, 40, 42, 44, 46 and 48. Size 36 takes 4½ yards 39 inch fabric. Illustrated step-by-step sewing instructions included.

Send twenty cents (20c) in coin or stamps (coin preferred) for this Anne Adams pattern. Write plainly Size, Name, Address and Style Number, and send order to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

### Will Boost Circulation

#### Fascist Party Members Must Subscribe To Mussolini's Newspaper

All members of the Fascist party in Italy must subscribe to Mussolini's newspaper, the Popolo d'Italia, according to an order just promulgated by Gen. Starace, the party head. And it is well understood in Germany that all Nazis, and indeed all Germans, must buy at least one copy of Hitler's book, "Mein Kampf."

Hitler does not need to receive money from the state. He can live well on his book royalties. Now Mussolini will have an even larger personal income from his newspaper.—Chicago Daily News.

### For Better View

To give an engineer better views of the track ahead of him a western railroad is experimenting with an oil burning freight locomotive that appears to run backward, the cab being placed at the front end of a train.

### ARTICLE No. 2

#### WHAT IS CANCER?

Cancer is a disease due to disorders of the cells of one's body. Everyone knows that the human body is composed of cells, hundreds of millions of them. The individual cell is extremely small. If a body cell were magnified 500 times it would appear to be about the size of a small pin's head.

Each of these cells, so infinitely small, is a living thing. It is composed of a semi-solid material, has a sort of wall and a nucleus in its midst. The nucleus is the most important part of the cell. Each individual cell is able to move; it is able to gain nourishment from its surroundings; it is able to breathe. What is still more remarkable, each and every one of the hundreds of millions of cells in our bodies is able to reproduce itself.

Reproduction of cells takes place by division. In the division of a cell the operation begins in the nucleus. The nucleus divides in two and, in the course of from three to twelve hours, the entire cell divides. In their subsequent life the divisions of the cell mature. When matured, they too, divide just as the parent cell divided. What is the purpose of this division of cells? The purpose is growth. It is by division of cells that the various organs of the body develop and grow. It is in this way that we have development of bones and teeth, of the skin and brain, of the heart and nerves and of all parts of one's body.

A cancer begins as a single cell. At first it looks exactly like one of the normal cells just described. It takes an expert with the microscope to detect any difference between a cancer cell and a normal cell. The cancer cell, like the normal cell, divides for the purpose of growth. So far, the cancer cell and the normal cell are almost alike. The growth manifested by division of the normal cell is a regular controlled process. There is certainly some force in one's body which controls ordinary cell division, starts it when necessary, stops it when division is unnecessary. This control in healthy persons is maintained throughout life.

The growth of a cancer cell is uncontrolled. Its growth is riotous. A cancer cell is a sort of bolshevik. Instead of dividing, like the normal cell, in the course of from three to twelve hours, there may be many divisions of the cancer cell in that period. It is this rapid, uncontrolled division of the cell that constitutes the main difference between normal growth and cancer growth. If the lever of control in cell growth were discovered we might therein have a solution of the cancer problem. Some investigators have come pretty close to the solution. One day it will be found.

Article No. 3 will be "Cause of Cancer".

### Trying Something Different

#### Londoners Going From England To Cape Town In Speed Boat

Two Londoners have thought of something that hasn't been done before—something a little safer than shooting Niagara Falls in a barrel but risky enough. In a 75-foot speed boat they hope to make the water journey from Southampton to Cape Town, South Africa, in 25 days. Commander C. O. Luxmoor, R. N., 36 is pilot, and bemonocled Robert Stewart, 26, is engineer. They hope to average 300 miles a day and their course lies along the French coast, Spanish coast, the Mediterranean, Suez Canal, Red Sea and East African coast.

Southern New Jersey was the centre of the glass industry for nearly a century from 1770.

## THE CANADIAN ADVENTURE TRIP OF BOB SIM, AN ONTARIO FARM BOY

No. 6 of a Series of 16 Letters

Parlez-vous Français? Bob tried it—not so good! 300 bushels of potatoes per acre in New Brunswick interested Bob, as did 1,000 people at church in a small Quebec village. He's on his way West now, gaining knowledge every day along with a good sun-tan.

Riviere du Loup, Quebec. (Special despatch by Bob Sim).—Riviere du Loup or as the English would say, the River of the Wolf, which pours its boiling waters into the mighty St. Lawrence, gives its name to a busy industrial town where I am spending the night. From where I sit, there is a splendid view of the St. Lawrence River which is over fifteen miles wide at this point. At this moment the sun is setting behind the blue hills of the north shore of the river.

To-morrow I will start west and south following the river five hundred miles to Kingston, Ontario. But the river does not end there; the St. Lawrence system which drains half a continent, goes north and west into Manitoba. For sheer size and magnificence the St. Lawrence must rival the world's greatest rivers.

### Farewell to New Brunswick

After crossing the Bay of Fundy last week I began to follow the St. John River which runs from the city of St. John inland almost to Quebec City. It is more beautiful than the St. Lawrence with its brilliant blue water. A gentleman who has travelled the continent declares that the St. John Valley is the most beautiful in America.

In St. John City I saw the Reversing Falls, but did not see the falls reversing—if you know what I mean. That is, I saw the water running one way in the evening, and another way in the morning, but I did not actually see them reverse. These falls, which might well be one of the Seven Wonders, are a phenomena caused by the enormous tides.

### Necessity Breeds Invention

Cemeteries are apparently less formidable here than in Ontario. St. John and Fredericton both have cemeteries in their downtown sections. The stones on the very old graves are about six feet square, sitting like a table on four stone blocks about two feet from the ground. Passing the Fredericton cemetery at dusk I could discern two lovers seated on one of these tomb stones. I recalled such an incident in one of L. M. Montgomery's books but couldn't visualize it on any tomb stone I had ever seen then; however it seemed to suit this couple as well as any expensive chandelier.

### The Potato Country

Potatoes are grown in the Upper St. John Valley not by the acre, but by the field. The average farmer grows around fifteen acres, while a potato ranch will plant as much as two hundred acres. The land is high, well drained, with a light reddish soil. Hog raising is a complementary industry; each farm has its potato kettle where they boil spuds for the hogs.

The farmers here are scientific, as are the apple growers of the Annapolis Valley. By selection and breeding they have developed a superior potato, as well as a high yield. One hundred bushels to the acre was once considered a good crop. With the use of sprays and fertilizers they now produce 300 bushels to the acre.

As a result the New Brunswick potato commands a higher price on the market than any other potato, as we know in Ontario to our sorrow. But they have the same problems as the farmers in the West for their prices depend on export trade, tariffs, and foreign crops.

### Parlez-Vous Français?

What would you do, my friend, if you landed in a home where no English was spoken? Yesterday I was walking down the road and a French habitant called me into the house. I dreaded going, but there was no alternative. We had a dreadful time understanding each other, but I showed them on the map where I had been, and the post cards I had bought. They had a little baby which is something one can admire in any language, so all in all it wasn't so bad.

But to think of the years we spend in High school studying French, then we can't ask a fellow Canadian for a drink of water in his own tongue. I think French is badly taught in High school; they call it Parisian French, but I hope the Parisians don't hear about it. We must, if we hope to increase our friendship with Quebec, learn to appreciate their language and literature.

It is thrilling to be in a Quebec town on Sunday. There is one huge church at the centre, with hundreds of horses and buggies as well as cars around the church. There were well over a thousand at church in this small village. The farmers here do not as a rule retire, but spend their whole life on the farm, living in old age with the son who takes over the land. They have huge families, usually with one going into the ministry, and one to a convent, one or two taking up land, while the rest go to town. The French population is in-

creasing so rapidly it is estimated they will equal the English sections in a few generations.

My next letter will be written from my home in Ontario where plans will be made for the trip West. I am hoping to be able to drive out West, as thumbing has its disadvantages.

### Jews Suffer Hardships

#### North American Aid Has Assisted Jews In European Countries

The year 1936 witnessed an intensification and aggravation of Jewish suffering and hardship throughout a great part of Central and Eastern Europe, according to the report for 1936 of the American Jewish Joint Distribution Committee, prepared for the members of its National Council by Joseph C. Hyman, executive director. Members of the J.D.C.'s National Council in Ottawa are Mrs. A. J. Freiman, O.B.E., Lawrence Freiman and Benjamin Goldfield.

The Jewish population of Germany had declined to 330,000 according to available estimates, at the conclusion of the year and throughout Poland, Rumania, and other parts of Eastern Europe North American aid alone has enabled hundreds of thousands to survive the increasingly critical conditions, says the report.

The Joint Distribution Committee spent \$562,885 for aid to the Jews of Germany, including emigration, vocational retraining, economic aid, schooling for children and other welfare activities. In Poland, Rumania, Latvia, Lithuania and other countries of Eastern Europe the Joint Distribution Committee and its affiliated agency, the American Joint Reconstruction Foundation, granted \$1,622,250 in new appropriations and revolving credits.

### Bakes Them Herself

#### Woman Running For Mayor Gives Voters Hot Cinnamon Buns

In its 229 years of history, says the New York World-Telegram, the city of Annapolis, Md., has had many mayors, all men. Now, for the first time, a woman—Mrs. Mildred M. Clements—is running for mayor, having been nominated by the Republicans, and instead of passing out the time-honored campaign cigars she is wooing the voters with hot cinnamon buns, baked by herself.

Wise Mrs. Clements. She knows the way to a voter's heart. We hope she'll be triumphantly elected, but if there's a hot cinnamon bun for every vote they'll have to keep close watch against repeaters in that Annapolis election.

### Wrote To Thackeray

#### Hollywood Producer Wanted To Film One Of His Novels

Recently a copy of "Henry Esmond," by Thackeray, published in book form, fell into the hands of one of the big movie producers in Hollywood, California. In due time, a letter came to the publisher of the book, addressed to "William Makepeace Thackeray," explaining that this story was being considered for movie production and asking Mr. Thackeray whether he would write a film version of the novel.

The publisher wrote the movie company under the name of Thackeray, dead since 1863, that if they liked "Henry Esmond" they should wait until the next story by Thackeray came out which was to be named "Vanity Fair."—Financial Times.

### Second-Hand Planes

#### Will Some Day Be As Common As Second Hand Cars

Going, going—gone! That's how it is with an airplane, and that's how it was at Heston, where the first public auction of 'planes brought brisk upward bidding. The establishment of a second-hand market for potential pilots is the last thing needed to demonstrate how commonplace flying has become.

The day is coming when rows of machines neatly ticketed with their knock-out prices will be a familiar sight along the main roads.—Overseas Daily Mail.

Celluloid was discovered by a type-setter, named Hyatt, who was trying to find a cheap material for making billiard balls.

Chemical engineering can treat quicksands and quagmires so that they become capable of supporting heavy building structures.

# WILSON'S FLY PADS REALLY KILL

One pad kills flies all day and every day for 2 or 3 weeks. 3 pads in each packet. No spraying, no stickiness, no bad odor. Ask your Druggist, Grocery or General Store.

10 CENTS PER PACKET

WHY PAY MORE?

THE WILSON FLY PAD CO., Hamilton, Ont.

## THE YELLOW BRIAR

A Story of the Irish on the Canadian Countryside

By PATRICK SLATER

By arrangement with Thomas Allen, Publisher, Toronto.

CHAPTER VIII.—Continued

Bob finally tired of watching the antics of the excited heifer and the silly goings on of the man. He jumped up on Marshall and whined at him, invited him to exercise a little commonsense. Then he led the man in quite another direction and far off from the cow, and there across the creek and over a little knoll, the excited heifer, chasing after them, saw the two brutes find her hidden calf.

Now, you apprehend, gentlemen, I am merely summing up the facts for your guidance; and from these facts you will draw your own conclusions. I am not suggesting that Bob thought the silly, little, soft-skinned calf would be safer in the farm stable than lying unprotected in a lonely bush. Neither am I asking you to find on this evidence that Bob wanted the calf at the home-stead because that would make it a simpler job for him to drive the mother up there twice daily. I do not say that Bob wanted the calf taken up at all. I should, however, point out to you that the uncontradicted evidence discloses that the dog showed unmistakable signs of delight as Marshall hoisted the eighty weight of young life across his shoulders, and gripping the soft legs, trudged homeward followed by the excited and wild-eyed mother. As I said before, I am merely summing up the facts for you.

It is, of course, merely a play of fancy to attribute to a dog the thoughts of the human mind. What the woman he loves really thinks of him is past any man's finding out; and next to that, comes the mystery of what is going on in the mind of his dog. The human cannot even know what sort of a world it is a dog thinks he is living in. The creature's concepts of time and space may be different from ours. Objects may have other color tones for him; and sounds that please some human ears are often painfully distressing to a dog. Neither the master nor his dog can ever know the physical world save as thoughts floating on a stream of consciousness. If that world exists other than as thought, neither of them can know anything about it; and since they cannot talk the matter over and compare notes, the dog and his man can never be quite sure their separate dream worlds are similar in kind to one another.

But a man does know and can understand the feelings and emotions of his dog. He knows, for instance, that the dog has a conscience, and is sorry for his sins. He knows that for the dog anything is a sin that displeases his master; and that in the dog's life such sins are usually committed because he does not understand. As with the dog, so with the human, sin is caused by lack of love or by ignorance.

Well, up on that Mono farm, time kept flying by; and by the spring of

## BLACKHEADS

Get two ounces of peroxide powder from your druggist. Sprinkle on a hot, wet cloth and rub the face gently. Every blackhead will be dissolved. The one safe, sure and simple way to remove blackheads. Have a Holly-wood complexion.

1854, we had buried Old Hickory Mick, the Catholic school teacher. The Orange families in the section felt easier in mind, now, that they had for master a good Protestant like Nathaniel Carson, who did not believe in a god at all. Meanwhile, Bob O'New Pitsligo had grown into an orderly and quiet dog. Once in awhile, he might go off for a day or two, to come back with the fatigue of love in his brown eyes; but the days of joyous play and romping were no more for Bob; nor for his boy, Charlie, who was now a sturdy, serious-minded lad of fourteen. They remained as great friends as ever, but neither saw any occasion for displaying feelings that were deepening with the passing years. Charlie had developed into a regular, thorough-going, young farmer, much to his father's pride and joy; and Bob still brought the milk cows home.

Yes, time kept slipping away like dry sand through one's fingers. Rev. C. M. Clarke came to the Mono Wesleyan circuit to carry on what he called his peripatetic ministry. He was a well-educated young Englishman from the town of Bristol, full of enthusiasm and painstaking to a fault; but he was a greenhorn on his first preaching appointment in Canada—and he was no horseman. He arrived at Mono Mills on foot; and the local Quarterly Board directed one of its brethren, Thomas Henderson, to secure the new minister a horse to bear him over the long stretches between his preaching appointments. The minister thanked the board kindly, but begged them earnestly to secure him a quiet, docile beast. They finally bought him a bay mare from a farmer down Sand Hill way. Several of the brethren had on occasions observed the shabby old mare standing untied on the village street, patiently awaiting her master's pleasure; and they all agreed she would make a reliable mount for the inexperienced young clergyman.

After powerful assurances had been given him, Rev. Mr. Clarke was hoisted into the saddle and set off on his way. The mare, Meg, was gentle with her shaky charge, and faithful enough to be sure; but she pulled up sedately at the first tavern door on the 6th line, and not a step farther would she budge for him until her rider had dismounted. In those days there was a tavern every mile or two on any road on which teaming was done. The indignant clergyman left his gift horse standing at the third tavern door and fared away stoutly on foot. Nor could he ever be induced to mount a saddle again.

Throughout the year, there was a constant pressure of heavy work to be done on the Marshall farm. Even the floating field stones were turning into silver, as saleable grey lime, in rude kilns that kept crying out for hardwood, and were never satisfied. The Canada Jay came around each spring to tell us to get the buckets out and tap the sugar maple bush. There was a steady throng of work; but there always seemed to be plenty of hands to do it. A neighbor's daughter was helping in the house; and Sarah Duncan, with her sweet, homely old face, was up from the village half the time, doing the family's sewing and mending. The Marshalls always kept a hired man and wife who lived in; and in the fall of '54 William Edwards and his wife were completing their second year of service on the farm. They had come from down in New York State; and when their time was up that fall they decided to go down home for the winter.

One gets to know people well after living on the same farm with them for two years. Edwards was a quiet-spoken man, clean and tidy in his personal habits, and gentle with every creature about the place. The children liked him, and tagged after him in his work. His wife, in Mrs. Marshall's opinion, was a bit scatter-witted; but she was a caution to work, and she did not talk back. Edwards, himself, was religiously minded in an emotional way. He made a practice of praying aloud; and he made special efforts that God would hear his prayers. As a devout, Primitive Methodist, he stoutly maintained we should have cold victuals on the Lord's Day, which always struck me as a curious notion for a hired man to have. I shall always remember his appearance; because he had the high-domed skull of Arthur, the Duke of Wellington. His principal worry in life seemed to be the bald spot that was spreading

from his forehead back to the quarters where the pig brains lie. To remedy it, he was using "Close-hugh's Tricopherous", a sovereign, patent medicine for bald heads in those days, guaranteed to quicken the hair roots into active life and to grow a healthy swath after the third bottle.

Everybody about the place felt sorry the young couple were leaving. Sugar maples were turning the time Edwards was paid off, and the couple prepared to go on their way. Above the faded green of the late summer, patches of golden ochre and of brilliant crimson were showing on the wooded hillslopes. And, here and there, the frost had dashed the foliage of a spreading branch with the carmine of dark scarlet wine, which was fading at the edges into the rich brown of dead leaves idly fluttering down.

The night before they left neighbors dropped over to wish them good-speed; the respectable young couple were well thought of in the little community. And you know the sort of thing it was. The men cracked butternuts before the big fireplace; and the womanfolk amused themselves in their simple way. Hymns were sung and some victuals were served before the party broke up. Oh! yes, Mrs. Edwards would write—she was one of those giggling women—and tell the folk all about their trip.

It had been arranged that Charlie Marshall take the wagon and team, and give the Edwards a lift as far as Toronto. And I wish you to know this was a mighty important affair in the eyes of young Charlie. He was being trusted with that valuable team of bays—all on his own, as you may say. He was taking some produce down to his grandma at the Tavern Tyrone—a firkin of butter, hams and a few dressed chickens; and he might stay with her for a day or two. So he was all spruced up for the occasion. The harness had been oiled and the wagon wheels greased. Charlie's boots were shined to perfection; and Edwards had given him a dandy hair trim.

The party set off bright and early in the morning. They left with every one in the best of spirits, save Bob O'New Pitsligo. The dog had planned, of course, to go along; but, at the last moment, Mrs. Marshall played a dirty trick on him, and tied him up. But a wise dog knows it is a long lane that has no turning. Bob amused himself cracking fleas during the day, and consoled his soul in patience.

The time came for bringing the cows home for the evening milking. So, of course, they let Bob loose. But the dog's mind was not on the cows. He quietly trotted down the lane, and took the first turning to the left. Paddy was sent for the cows; and the milking was late.

At daybreak the next morning, Bob was back scratching at the kitchen door.

He looked a bit travel-worn; and his muzzle was stained. Marshall scolded the dog harshly.

"Oh! let poor Bobbie be!" said the wife, "he is greeting for his lad."

(To Be Continued)

## There's No Safety In Numbers

Not Where Flies Are Concerned Anyway

The number of flies that can trace their origin to one single female house-fly during the season runs into the millions.

When you consider that each single one of this host is an individual carrier of the worst sort of filth, it must be obvious how important it is to combat this menace. Flies delight in feeding on uncovered garbage, refuse, rotting animal and vegetable matter, horse manure, in fact, everything that is particularly obnoxious to us humans.

Think what may happen if one of the loathsome pests gets into a home and is left unmolested. The baby's bottle, even the sleeping baby's lips, and any food or drink left, are choice spots on which he will settle, leaving disease and even death in his wake.

What are we to do to fight this menace? Remove or protect all the breeding grounds we have mentioned and any others that may prove breeding grounds for flies, and keep doors and windows protected with adequate screens. Cover all food and drink at all times. And, to make assurance doubly sure, place some Wilson's Fly Pads around the house in every room. They attract the flies and kill them all very quickly. 2212

## Visits Home Of Ancestors

Prime Minister Mackenzie King Explores Old Manor House In Scotland

Mr. W. L. Mackenzie King, Prime Minister of Canada, was able recently to satisfy a life-long ambition.

He traced the birthplace of his paternal grandfather to Ladysford, Tyrie, and had tea in the room in which probably that pioneer was christened. Before leaving, Mr. Mackenzie King was presented with a carved wooden chair which had come from the old church at Tyrie.

It was indeed a day that the Canadian Premier will look back upon with the happiest of memories. Again and again he expressed his delight as he examined the old manor house which was his grandfather's home before he went to Canada with the Royal Horse Artillery.

"It is a great pleasure to me to visit the home of my grandparents," he said. "I only wish my father could have been here along with me."

It was by the happiest of coincidences that Mr. Mackenzie King was able to satisfy his lifelong wish. When he heard that he was to be offered the freedom of Aberdeen, he immediately wrote to Lady Aberdeen asking her if she could make some inquiries as to the birthplace of his grandfather.

Lady Aberdeen got in touch with Mr. A. G. Brown, a former provost of Fraserburgh, who, after making an extensive search, discovered that it was at Ladysford that Mr. Mackenzie King's grandfather, Mr. John King, had spent his early days. It was a short time later that Mr. Brown received conclusive evidence from Register House in Edinburgh that Ladysford had actually been the home of Mr. John King.

The Dominion Premier could hardly wait to visit the old place.

They motored to the house, which is surrounded by a lovely garden, descended on the surprised occupant, Mrs. Davidson, tenant of the farm of Ladysford, and for an hour Mr. Mackenzie King explored the building and its surroundings, being charmed with the old-world atmosphere of the place.

He was particularly interested in some old stone steps near the house which served as a mounting and dismounting place for ponies.

The building, which is at least 200 years old, is built very solidly of granite, and roofed with old Scots slate. A two-storey house with two side wings projecting forward, it has that substantial appearance typical of the old manor houses of Scotland.

It was in this house that Mr. King's grandfather was baptized on May 3, 1814, and when Mrs. Davidson insisted on her distinguished guest having tea in the room in which probably the ceremony was performed, Mr. Mackenzie King's delight knew no bounds.—Aberdeen Press and Journal.

## Turns To Scrap Iron

Britain Faced By Shortage For Arms Appeals To People

Confronted by the insatiable steel demands of the government's rearmament program and an acute shortage of raw materials, the British steel industry has been driven to imitate Germany and Italy in turning to barns and lumber-rooms for scrap iron. The British Iron and Steel Federation appealed to householders, farmers and manufacturers to sell their discarded cookers, stoves, broken pots and pans, farm implements and scrapped machinery.

## Room Papered With Stamps

Stamp dealers and collectors in England spent a holiday at North Bersted studying the walls of a room pasted with thousands of stamps. This was done by the owner to commemorate Queen Victoria's reign and took him 55 years to finish.

## Little Helps For This Week

He maketh me to lie down in green pastures. Psalm 23:2.

O the peace at the heart of nature,  
O the light that is not of day;  
Why seek it afar forever  
When it cannot be taken away?

What joy it should be for me to look up and see God's love in everything, to feel that the blue depths of the sky are a real canopy of blessing, the roof of the house of my Father. To know if clouds pass over, it is just the unchangeable light they veil, and even when the day itself passes I shall see that the night itself only reveals new worlds of light. And to know if I could unwrap fold after fold of God's universe I should only find more and more blessings and see deeper and deeper into the love which is at the heart of it all.

## Experiment With Trees

New Fast Growing Poplar Has Been Evolved In Canada

A new race of trees is being bred in Canada. D. A. Macdonald, assistant Dominion forester, reports. Experiments give promise of a new fast-growing, tough poplar tree specially suited to the needs of the paper and match industries.

For the past year or so Dr. C. Heimburger, of the Dominion forestry service, who is described by fellow workers as one of the world's most eminent experts on forestry genetics, has been cross-breeding poplars to produce a tree combining the desirable characteristics of several species.

Encouraging results have been obtained, Mr. Macdonald said, with hybrids possessing the fast-growing qualities of the Carolina poplar and the toughness of certain European varieties.

The Carolina poplar reached maturity in 12 or 15 years, but is susceptible to rot at the centre. The slower growing European trees have the advantage of remaining firm throughout.

## Just Changed Around

People Now Want Bathroom Bigger Than Kitchen

Builders of modern homes say there is a tendency to increase the size of bathrooms, to provide more dressing space. With this, they add, goes a decrease in the size of kitchens, making them just big enough to include the essential mechanical equipment.

Once upon a time the kitchen was the centre of the home. "The Country Kitchen," written by Michigan-born Della Thompson Lutes, was a best-seller partly because it stirred the reader to remembrance of the old-fashioned kitchen, clean, warm and cozy, fragrant with the odors of cookery.—Detroit Free Press.

## Governor-Generalities

Always humorous Lord Tweedsmuir can be depended on for a spark of laughter when he speaks. Addressing a group recently at Kingston, the Governor-General mentioned that he could not talk on subjects of political contention. He added he was hedged about in his speaking, saying: "In fact, I am confined to Governor-Generalities."

## Keeps Accurate Record

The United States is far advanced in the matter of keeping records and statistics. They have it down this fine: Every fourteen seconds there is a birth, a death every 22 seconds; an emigration every seven minutes and an immigration every 12 minutes. This results in an increase in population of one every 36 seconds.

Thousands of houses are being constructed in Greece.

For the best values in Harvest Gloves see T. E. Scott. We have them from 40c up.

## Rugby Notes

With an attendance of 25 the August meeting of Rugby W.I. was held at the home of Mrs. G. Younger. A rather lengthy business session was followed by a report on the recent constituency conference by Mrs. Parker, with a discussion thereon. Mrs. H. Jackson then told of all the "Happenings" at O.S.A. during Farm Women's Week, which she had attended as one of the Rugby delegates. The meeting then adjourned and lunch was served. Next month's meeting will be held at the home of Mrs. O. Krebs.

Mrs. Phillips of San Francisco is visiting her daughter, Mrs. Henry Goehring. She is on her return from a bus trip to the Eastern United States, and left San Francisco in April to return in September.

Mr. and Mrs. C. R. Ford and Yvonne returned on Saturday from Calgary, Mr. Ford having completed his course in manual training in the summer school held at the Calgary Technical School.

## IN MEMORIAM

In loving memory of Lizzie (Shelly) Brubacher, who died August 12 1935:

No one knows how much we miss you,  
No one knows the bitter pain  
We have suffered. Since we lost you  
Life has never been the same.  
In our hearts your memory lingers,  
Sweetly tender, fond and true.  
There is not a day, Dear Mother,  
That we do not think of you.  
—Sadly missed by husband and children.
